THE MILITARY AFFAIRS COMMITTEE (MAC)

Politics and Development

The Military Affairs Committee (MAC) of the Central Committee (sometimes translated as the Central Military Commission), has been the key organ of Party control over the military ever since the early days of the Chinese revolution. Although its name, composition and duties have varied over time, it is now clearly the supreme organ responsible for the control, deployment and development of the People's Liberation Army (PLA).

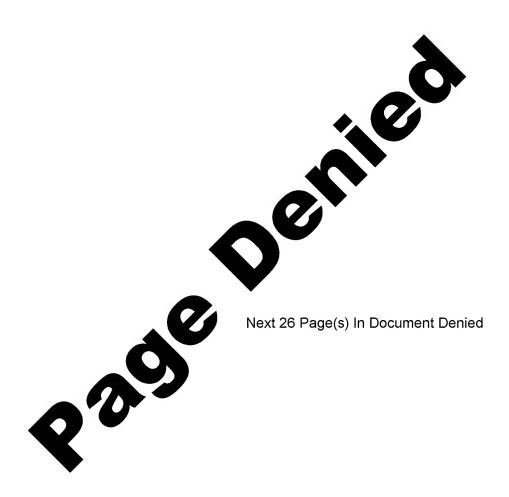

Organizationally, the MAC is subordinate only to the Standing Committee of the Politburo of the Chinese Communist Party (CCP). It was in no way responsible to the Party Secretariat during the time when that body exercised supervisory control within the CCP. During the Cultural Revolution, there were times when it appeared that the MAC was to some degree responsible to the Cultural Revolution Group (CRG) of the Central Committee, but that degree is open to some question. Since the dismantling of the CRG, no overall supervisory Party organ has been formally established, but even if, as some have speculated, the Secretariat has been revived in some form, it is likely that the MAC will retain its independence, and will remain responsible only to the highest levels of Party authority.

Although the past three Ministers of National Defense have wielded considerable influence within the MAC, there are no structural lines subordinating it to the MND, which is an organ of the State Council. If anything, the reverse is more likely the case, that is, that the MND is a "paper" organization, a best a low-level administrative body, subordinate in all military or substantive matters to the MAC rather than to the State Council. (See below for a further discussion of the Ministry of National Defense.)

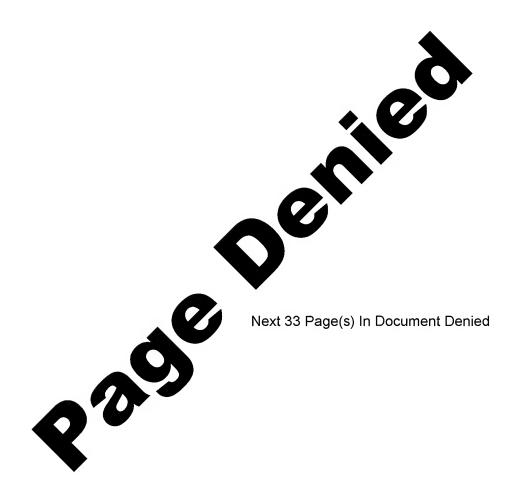

Under Politburo direction, the MAC has authority over the entire Chinese military establishment, and may send orders directly to any component, though it ordinarily transmits these through the General Staff. The MAC apparently serves in an advisory capacity for Politburo discussions of military-related matters. It interprets, sometimes reformulates, and transmits doctrines, policies and programs for the PLA; it

THE GENERAL STAFF DEPARTMENT (GSD)	
Politics and Development	
There is no component of the PLA that was hit earlier or harder by the Lin Piao Affair purges than the General Staff Department (GSD). The primary reason for this appears to be the fact that Lin had packed the GSD with his proteges and was attempting to use it as a means for his own personal domination of the PLA.	
	25X1
	25X1
	0EV4
The general staff concept was	25 X 1
probably introduced to China in the early 1920s through the successive influence of the Japanese (through returned students), the	
Russians (in the Whampoa Military Academy) and the Germans (Nationalist advisers, somewhat later). Owing to the Whampoa influence,	•
Chinese Communist armies seem to have adopted the staff concept without question ever since they became more than guerrilla bands	
in the late 1920s. It was not until the late 1930s, however, when the Chinese Communists had established a firm base area and	
had recruited a large army, that the staff concept moved beyond the army-level of organization and became a centralized function.	051

THE GENERAL POLITICAL DEPARTMENT (GPD)
Politics and Development
It would appear that, after a long period of being in a sort of bureaucratic limbo, the General Political Department (GPD) of the PLA has been restored to fulfill its traditional functions. There are now increasing numbers of personnel publicly associated with the GPD, and the department has again begun to issue public directives, sponsor conferences, etc.
The GPD, which has rightly been called the most important peacetime organ of the PLA, has traditionally been responsible for maintaining the political awareness, ideological orthodoxy and loyalty to the regime that Mao has often stated to be an absolute requisite for the success of socialism in China.* In this regard, the GPD has been the most important organ dealing with what is ordinarily referred to as "political security" in the military, which includes such matters as surveillance, enforcing political discipline, and controlling promotions and demotions.
Organizationally, the GPD has been subordinate only to the MAC or its equivalent ever since its inception in 1931. It is generally considered to be co-equal in authority with the GSD, co-ordinating with it when necessary, but in no way subordinate. Up until the Cultural Revolution, its leadership remained comparatively stable, though strains must have begun to appear in the early 1960s, when Mao and Lin began their effort to make the PLA a political show ase by heightening the intensity of ideal logical education in the PLA.

		25X1
	purges in the military got underway in 1967, the GPD was hit early and hard, with virtually the entire leadership, including the Director and his deputies as well as many sub-department directors and deputies, eventually removed and heavily criticized. By August of 1967, the GPD had virtually ceased to exist, its functions having been taken over by the CRG of the PLA and a military "Support-the-Left" group, both essentially under the supervision of the Secretary-General of the MAC. In late 1967, this structure underwent a further change with the dissolution of the PLA/CRG, and responsibility for political indoctrination and security work was divided among several MAC organs (See under MAC), particularly the Political Work Group, and later the Administrative Office.

THE -GENERAL -LOGISTICS -DEPARTMENT - (GLD)

Politics and Development

The General Logistics Department (also known as the General Rear Services Department /GRSD/) is responsible for overall logistical planning and support for all components of the PLA. Aside from the expected responsibility for quartermaster, ordnance and transportation, GLD functions include administration of all PLA hospitals, control of finances for the PLA, some administrative control over military barracks, academies and factories, and responsibility for veterinary work in the army. Not surprisingly, such a wide range of activities entails a rather large staff organization, and the GLD leadership group is the largest of the headquarters departments, with ten known Deputy Directors and several political officers

wno appear regularly in public.

Organizationally, the GLD is, on paper at least, co-equal with the GSD and GPD, subordinate only to the Military Commission. In practice, however, it is more likely that the GLD is subordinate in some fashion or another to the General Staff, since Logistics is such a key factor in operational planning. The exact nature of this relationship, however, is unknown.

The GLD coordinates its work through the logistics sections of the various service headquarters, military region and district commands and field armies in the PRC. It is also organized into several functional departments and bureaus, which handle the various aspects of logistics work. Unlike the GSD and GPD, it would appear that the various Deputy Directors of the GLD have specific responsibility over these functional departments. Though the exact names of these departments may have changed over time, and reorganizations have no doubt taken place, it is believed that the following sub-departments exist within the GLD:

Political Department -- Responsible for political security and indoctrination within the GLD.

Ordnance Department (also known as Weapons and Equipment Department ment or Armaments Department) Probably responsible for production, storage, and supply of ordnance for units in the PLA, as well as foreign countries.
Enterprise Department (possibly the same as the Quartermaster Department) Probably responsible for production and supply of non-ordnance supplies such as clothing, tools, etc.
Transportation Department Probably responsible for distribution of military equipment to various PLA components.
Motor Vehicle Control Department Probably responsible for allocating military vehicles, inspecting motor pools, etc.
Fuel Department Probably responsible for procurement and distribution of POL supplies.
Military Facility Custody Department Probably responsible for planning, construction and maintenance of military bases, barracks, offices, etc.
Factory Control Department Probably responsible for administration and production control in military-related industrial plants.
Medical Department Responsible for administration, supply, training and upkeep of PLA hospitals and medical departments.
Finance Department Responsible for the PLA's accounting and pay systems.*

	25X1
The GRSD was organized as a central component of the People's Revolutionary Military Committee in 1949, and has developed in a comparatively orderly manner. Its leadership has been purged and shaken up from time to time, but never to an extent that it would impede the GLD from carrying out its crucial supply responsibilities. Dismissed leaders have generally been quickly replaced. Cultural Revolution purges of the military only brushed	•
lightly on the GLD, with one Political Officer and one Deputy Director being removed.	25X 25X

AIR FORCE HEADQUARTERS
The Air Force (commonly abbreviated CCAF) Headquarters in Peking is responsible for command and control of the world's third-largest air force.
the Air Force possesses its own command structure, consisting of MR Air Force commanders and staffs, which is subordinate directly to Peking. The primary mission of the CCAF is air defense, but it can also support tactical
operations.
Like all other functional components of the PLA, the CCAF is closely controlled by the central military hierarchy, taking its orders from the MAC (General Office) and the General Staff. Its headquarters consists of a Commander and Political Officer, each with several deputies, and staff officers. There are also believed to be several functional departments concerned with training, communications, meteorology, operations, logistics and aviation engineering. Below these are the 10 MR Air Force Commanders and their staffs.
The CCAF was organized in 1949 with considerable assistance from the Soviet Union, both in terms of materiel and of training. During the 1950s, the Soviets also helped the Chinese develop a large aircraft industry, as well as training procedures. The loss of Soviet assistance has been more damaging to the Air Force than to most other components, since the Chinese lack the technological capability to keep pace with the USSR or the US in aeronautical engineering and armaments. Most of their equipment is now considered obsolescent by Western and Soviet standards.
Given the mobility and destructive firepower that even an obsolescent air force can bring to bear, control of the CCAF at the command-level has been an important consideration in PLA politics.

	RAILWAY CORPS HEADQUARTERS	
	The PLA Railway Corps (or Railway Engineer Corps) got its start in Northeast China during the Chinese civil war, when Lin Piao's forces were able, for the first time, to make extensive use of the existing rail system to transport troops and materiel. After the establishment of the People's Republic, the Railway regiments were placed under the jurisdiction of the PRMC, but remained a rather small corps with a limited mission. They were instrumental in keeping up the flow of supplies to Chinese troops serving in Korea, despite heavy American bombing. In 1954, when Peking began a program to improve the communications network, the Railway Corps was established under the Ministry of National Defense, and its mission and strength were both considerably expanded. It was then made responsible for the construction, maintenance and security of China's strategic railroads, in addition to its more conventional military duties. The Railway Corps has thus played a key role in the development of China's economy, pushing rail lines through some of the world's most difficult terrain. Its current strength is placed at 13 to 15 divisions, or about 67,000 men	25X
	All Railway Corps units are under the control of the Rail-way Corps Headquarters in Peking. there are three, and perhaps five regional support headquarters, located in the main areas of rail construction. The nature of their mission requires units to work closely with both mili-] 25X
	tary and civilian authorities at the local level (local civilians often are 'volunteered' to augment the labor force on key rail projects).
